Food Service

LK® Side Gusset Bags

Gusseted bags feature creased sides that expand to accommodate bulky items. Low Density Polyethylene (LDPE) bags are the most commonly used plastic bag because they provide excellent protection and a great value. Elkay polyethylene bags are made from virgin materials, so they comply with FDA requirements for use in food applications.

LK® TUF-R® Linear Low Density Gusset Bags

Tuf-R® Linear Low Density Polyethylene (LLDPE) bags provide extra strength and puncture resistance compared to low density bags of the same gauge. Because of this, it's often possible to use a lighter gauge Tuf-R® bag to do the job of a heavier gauge LDPE bag, which saves money and helps to reduce the environmental impact. Tuf-R® bags are made from virgin materials, so they comply with USDA and FDA requirements for use in food applications.

Dart® ClearPac® SafeSeal™ Tamper-Evident Containers

Use to store and protect food from tampering. Crystal clarity and secure closure allow this container to be the star of the show. Each container has a TamperAlert Hinge™ with visible seal that, if broken, makes it obvious the container has been opened. The specialty lid inhibits the ability to lift it from the base without tearing the hinge. Once the seal is broken, the now two-piece container is easy to re-close and continues to be leak-resistant. Designed to prevent tampering without shrink bands or extra wrapping. The complete perimeter closure preserves freshness and prevents leaks and spills.

Strong Man Coreless Roll Can Liners

Made with a combination of LLDPE and LD resins. LLDPE has a high tensile strength and high impact and puncture resistance. It is very flexible and will elongate under stress. This provides the extra strength, elasticity and performance at lower mil weights.

LLDPE also has a good resistance to chemicals; they will perform well in temperature extremes and confine odors. LD is the most common plastic used to make can liners, as it is rather soft and flexible. By blending it with LLDPE, the strength increases without losing the thinner mil weights and flexibility.

Has a star-seal bottom. Perforated coreless roll.

Pitt Plastics Mini-Roll Can Liners

The unique blend of first grade high molecular weight High Density Polyethylene and LLDPE resins is puncture resistant, possesses impressive film strength and performs under temperature extremes of -40°F to 212°F. The high molecular weight of the High Density Polyethylene resin allows us to produce can liners that are approximately one-third the weight of traditional can liners with the same capacity. A lower weight bag of superior strength means less material is being used in production, making the High Density Mini-Roll a good choice when searching for a product sensitive to source reduction responsibility. Perforated for easy dispensing.
